### Part 3: Short Talk Questions

Dr. Joseph Dituri did something amazing. For 100 days, the 55-year-old medical engineer lived in an underwater hotel in Florida, USA. The pressure in his room was almost two times higher than that on the surface. His goal was to study the effects of increased pressure on the human body, especially with regard to aging. During his time underwater, Dituri stayed fit by eating a healthy diet and following a strict exercise program. Over the course of his underwater stay, his height had decreased by

1.2 centimeters, and he experienced improved sleep and lower cholesterol levels. Dituri hopes that his research could one day help humans achieve a longer life and prevent aging-related diseases.

(A) 1. What is the goal of Dr. Dituri's study?

- (A) To see how increased pressure affects aging.
- (B) To do research on animals that live underwater.
- (C) To break a record for the longest time spent underwater.
- (D) To find the best building material for underwater hotels.

(B) 2. How did Dr. Dituri's body change during the study?

- (A) He grew taller.
- (B) He became shorter.
- (C) He gained weight.
- (D) He lost weight.

(A) 3. What does Dr. Dituri hope his study will do?

- (A) Help increase the length of human lives.
- (B) Save sea animals that are about to disappear.
- (C) Develop ways for humans to live underwater.
- (D) Convince people to stay at underwater hotels.
